## BENEFIT NOTES: PRIOR AUTHORIZATION, STEP THERAPY AND QUANTITY LIMITS

Your prescription benefit program may include prior authorization, step therapy, and/or quantity limits for certain medications in order to ensure safe and appropriate use.

**Prior authorization** requires you and your doctor to acquire approval from DirectRx before the medication can be dispensed.

**Step therapy** is when your prescription benefit requires you to try another medicine (typically a generic) before beginning the medication prescribed by your doctor (usually a brand).

**Quantity limits** only allow you to get a maximum dosage or quantity of specific medications based on clinically accepted prescribing standards.
